CyberHound and Superloop help Seventh-day Adventist schools take advantage of secure and reliable Internet services to improve learning outcomes across 7 schools.

SDAS SQ have been a very happy customer of CyberHound for over five years. CyberHound has provided a full suite of internet management services across 7 schools. This includes cybersecurity and web filtering as well as CyberHound's unique behavioural analytics platform (ClearView) and its off-campus filtering and student wellbeing solution.

In December 2017 SDAS SQ extended its service arrangement with CyberHound for a further 3 years. CyberHound, and its parent company Superloop (ASX300: SLC), has been successfully working with SDAS SQ for the last 12 months in helping to redesign a Wide Area Network solution for the group. SDAS SQ will receive several benefits from this new service that Superloop is delivering, beyond clear financial savings. This includes increased capacity on all the services to its schools and the additional flexibility of using the extensive Superloop Fixed Wireless coverage available in Queensland. This means that remote schools can now have equal (metro-comparable) internet performance with clear teaching and learning benefits.

Superloop CEO, Bevan Slattery, said *"When I met with Steve Cowley and his team I was impressed by their vision and I was delighted to hear that their positive experience with CyberHound provided us the opportunity to work on the WAN. The service provided offers greater resilience, capacity and on-demand scalability. We back this up with direct 24x7 highly responsive managed services and we look forward to our increasing involvement with Steve and the team at SDAS SQ."*

Steve Cowley, Project Officer for Education Services, commented, *"we operate seven Adventist schools in South Queensland, providing education to more than two thousand students. A number of our schools have previously benefited from the cybersafety and learning enablement solutions provided by CyberHound. As our schools continue to expand and grow, we recognised the need for our internet delivery and management to grow, for it to be carefully managed, ensuring that we minimise the risk to each of our educational communities."*

"In addition, our organisation deeply values the importance of intentionally partnering with a company who is interested in building a relationship together - rather than just a business transaction. So when we asked CyberHound what options they could recommend, we were very pleased that they engaged the resources of the wider Superloop Group to ensure that we received the best quality and value internet and cybersafety possible. We highly recommend CyberHound and Superloop for any school that is looking to strengthen their learning outcomes through the delivery of quality internet connectivity and management"

Seventh-day Adventist Schools (South Queensland) Limited:

- Brisbane Adventist College
- Coral Coast Christian School
- Darling Downs Christian School
- Gold Coast Christian College
- Ipswich Adventist School
- Noosa Christian College
- Northpine Christian College

"It is reassuring to know that the flexibility of the solutions provided by CyberHound and Superloop will allow us to deliver and manage reliable internet connectivity to all of our schools. The experience of our ICT Team in dealing with the representatives from both CyberHound and Superloop has been professional, collaborative and always solution oriented. We will actively recommend Cyberhound and Superloop to our other sister-schools across Australia," **said Jack Ryan, CEO, Seventh-day Adventist Schools (South Queensland) Limited.**
