

Pattern Matching Technology Extended to Identify Radicalisation and Extremism

CyberHound offers its customers a unique service to identify student welfare issues using its patented ClearView technology. This service has now been extended to allow schools to help identify potential cases of radicalisation or extreme behaviour.

With the rise in risks to students around the world becoming influenced by extremists at home and abroad this solution assists schools in gaining evidence-based triggers to be able to intervene early and provide appropriate support to at risk students.

With recent cases indicating that students are being influenced through a variety of media – from YouTube, Facebook and Twitter to webmail and other instant messaging platforms, the need to be able to pick up on any potential cases of radicalisation, or in the worst cases recruitment by extremist groups, is more necessary than ever before.

CyberHound's platform seamlessly scans internet traffic looking for these indicators on social media, instant messaging, web browsing or search activity. Pulled together over even short periods of time this can provide school welfare officers with details on any concerning patterns of behaviour that may require further investigation and support provided.

This new service is complimentary for subscribers to CyberHound's Student Welfare solution, ClearView. It can also easily be enabled at schools not yet benefitting from this unique service.

“ *“I strongly endorse the CyberHound pattern matching solution to all schools. We have already seen extraordinary benefits in our schools – including the prevention of suicides and the protection of our students from predators.”*

Lynne Doneley, Executive Officer
Associated Christian Schools

This service complements the existing pattern matching features that include identification and prevention of:

- Cyberbullying
- Racism
- Eating disorders
- Self-harm
- Use of profanity

The solution has been used successfully by schools around the world to combat these challenges and also to help develop digital citizenship skills amongst student cohorts through a variety of online help and support, as well as by alerting relevant contacts in a school.

This same technology is now being licensed to world-leading software companies, such as Bloomberg, to help identify issues such as financial fraud and to enforce regulatory compliance.

The platform can be used within school and also on school-owned devices outside the school network.

CyberHound was recently awarded a sole supplier agreement with the Queensland Department of Education for this unique solution.

CyberHound has won global and local awards for its solutions that help deliver a safer and more productive environment for students in today's challenging times.

“ *“The CyberHound system enabled the school to take advantage of the "educational benefits" of the internet, while still controlling the seamier side of what's out there online. Schools realise we need to respond to this threat of radicalisation more now than they did five years ago.”*

Jeremy Ludowyke, Principal
Melbourne High School

“ *“There was "no doubt" more teenagers and members of their family were being recruited to fight for IS overseas.”*

James Merlino, Victorian Education Minister and Deputy Premier
