

CYBERHOUND SECURE WEB GATEWAY

GRANULAR CONTROLS OVER INTERNET USAGE AND SECURITY THREATS

CyberHound's Secure Web Gateway (SWG) offers an advanced web filtering service for internet traffic ensuring the network is protected and a school's duty of care requirements are being met. Additional services of the CyberHound SWG include user-based authentication, SSL inspection (to better filter the internet and prevent access to secure proxy, anonymisers and VPN tunneling technologies), user/group/school based reports with the XGEN reporting platform, AV/Malware scanning, BYOD on-boarding, a simple management interface and much more.

CYBERHOUND ADDITIONAL FEATURES

PREMIUM FEATURES

ClearView
YouTube Caching
PipePlus Load Balancing
Fully Managed Service
Advanced Threat Protection Services

INCLUDED IN UTM

NextGen Firewall
Application Controls
Gmail Spam Filtering
IPS/IDS
RoamSafe for iOS
ChromeSafe
VPN Services
Reverse Proxy

SNMP Support

Unlimited Web, Phone and Email Support

Managed Update Service

Cloud Backup and Restore Services (for Policies)

CyberHound's UTM Upgrade adds significant internet and network cybersecurity enhancements. If required a school can simply upgrade the existing CyberHound SWG to a CyberHound UTM via a simple cloud-based software update. The upgrade offers a Next Generation Firewall with enhanced application controls, and more, and can be supplemented with additional premium features (available without needing to upgrade to the UTM).

CYBERHOUND SECURE WEB GATEWAY

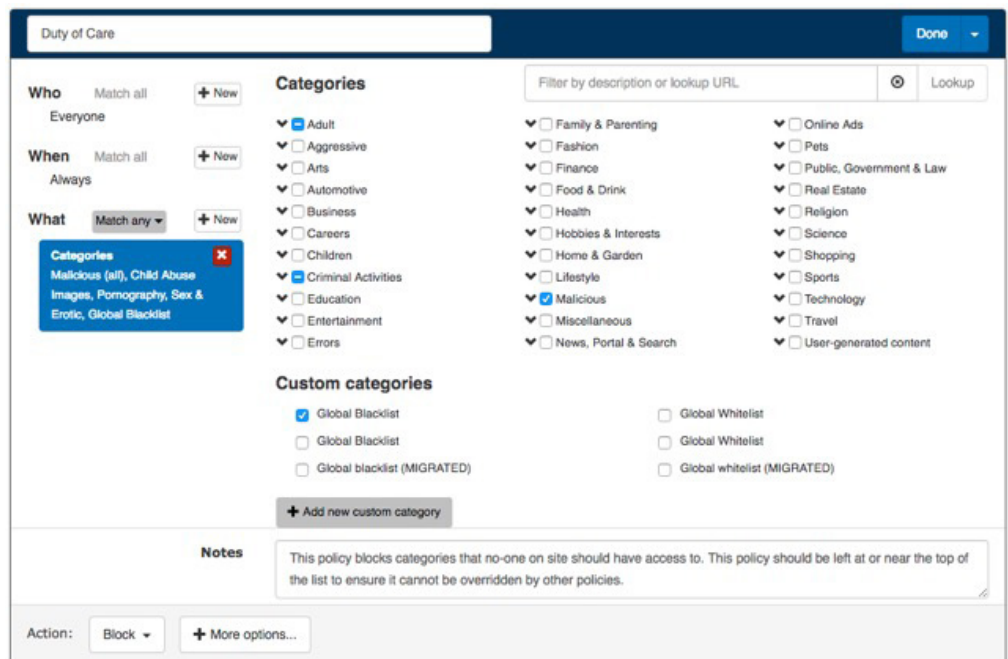

Advanced Web Filtering

CyberHound's advanced web filtering service has been developed specifically for schools. Using a combination of machine learning and 24x7 human quality assurance we can deliver faster categorisation than any other service whilst ensuring classroom required content is categorised correctly and made available. This service is used by 600 million users globally. This ensures the most accurate and up to date categorisation based on the collaborative benefits of the data analysis generated.

Ease of management

The simple management interface enables easy and granular control of all web content access. Default policies are available that can be easily customised.

Advanced Web Filtering Features:

- Real-time categorisation service
- Unrivalled coverage of 99.99% of the Active Web
- 200+ languages supported
- 32 master categories and 490 sub-categories for ease of use and granular control
- Customised filtering policy implementation (can be year-level specific)
- Full SSL inspection at a page level

Enhanced Web Security Services:

CyberHound's web security service is updated in real-time and offers advanced cybersecurity capabilities for schools.

This provides four critical features for schools:

- Web-based malware protection
- Up to date ransomware protection
- Vulnerability shielding
- Real-time web content reputation analysis

The CyberHound solution has proven to be easy to manage. The accuracy of the web filtering has helped save a lot of time and frustration. We have all been delighted by the performance of the solution as the previous solution caused internet performance degradation. I am very pleased with our decision to implement CyberHound's unique technology at the School.

Ed Tillyer, Kincoppal-Rose Bay School
