- ✓ Caching of eBooks & YouTube Enables Productivity
- ✓ Simplification of Access to Content and the Web
- ✓ Integration with Teacher Tools (eg LMS)

CyberHound is the only education-focused company based in Australia. Our Research and Development focus is on delivering the most innovative and useful solutions and services for Australian schools.

“CyberHound’s on-site engineers and managed services team have been fantastic. They planned the implementation with great care and gave us clear expectations on what to expect and how long it would take. Since we installed the solution their services team has been extremely helpful and professional. I enjoy dealing with them.”

Anthony Austin, ICT Manager, Penola Catholic College

“CyberHound provides a barrier to protect students from what can be very harmful occurrences in the virtual world. It is an ideal solution for schools to deal with the increasingly complex task of providing duty of care for students using technology.”

Stephen O’Doherty, CEO, Christian Schools Australia

A Unique Digital Leadership and Cybersafety Solution for Australian Schools

Classroom flexibility and helping students avoid distractions - CyberHound provides the best learning outcomes for students, while providing the ultimate in flexibility for teachers in class.

The benefits come from:

- Freeing up internet bandwidth to allow any content to be used in class – including YouTube
- Providing teachers with complete control over the internet
 - Blocking all internet access for the class
 - Allowing only a few websites (e.g. for exams)
 - Internet access controls for individual students
- Providing granular reporting on student internet activity
- Integrating with LMS platforms to make it even easier for teachers to access

All of the teacher controls are governed by the school's overall internet policies, ensuring any content that is accessed is appropriate and safe.

CyberHound's ability to manage applications is also a major benefit for teachers. This prevents students from being distracted by messages or communications from such apps. Controls over VPNs and other common tools students use to avoid internet controls is also built into the solution.

The solution means teachers gain efficiency in class and do not have to contact ICT every time they need access to content that otherwise may be hard to use.

The screenshot shows the CyberHound Lesson Management interface. At the top left is the CyberHound logo, and at the top right is the word "Lesson". Below the logo is a "Description" field containing "English Lesson" and a green "+ Create Override" button. The main content area is titled "English Lesson: LRLS" and shows "Expires at 11:10 PM". It features a YouTube URL: <https://www.youtube.com/watch?v=0VIVKgAERcg>. Below the URL is a "URL" field with the same URL and a blue "+ Add URL" button. There is also an "Accepted students" indicator showing 1 student. At the bottom, there are checkboxes for "Block all other access" and "Require confirmation", a "45 minutes" duration dropdown, and "Delete lesson" and "Stop lesson" buttons.

“

We wanted our learning environment to support the latest in contemporary teaching and learning practices. We wanted it to be invisible, seamless and robust. CyberHound has enabled this, becoming the backbone of all our learning services.

John Burns, Director of eLearning - Shekou International School
