

Staff VPN set up guide for Macintosh

This simple guide will enable you to set up a VPN connection to the school network. This ensures security on the connection which is important given the sensitive nature of the data and applications.

Requirements

The CyberHound certificate **MUST** be installed and trusted before continuing. When on the local network, browse to <http://cert.localnetwork.zone> from your device and follow the instructions. If offsite, please contact [redacted] for assistance.

MacOS Version: **10.12** (Sierra) or later

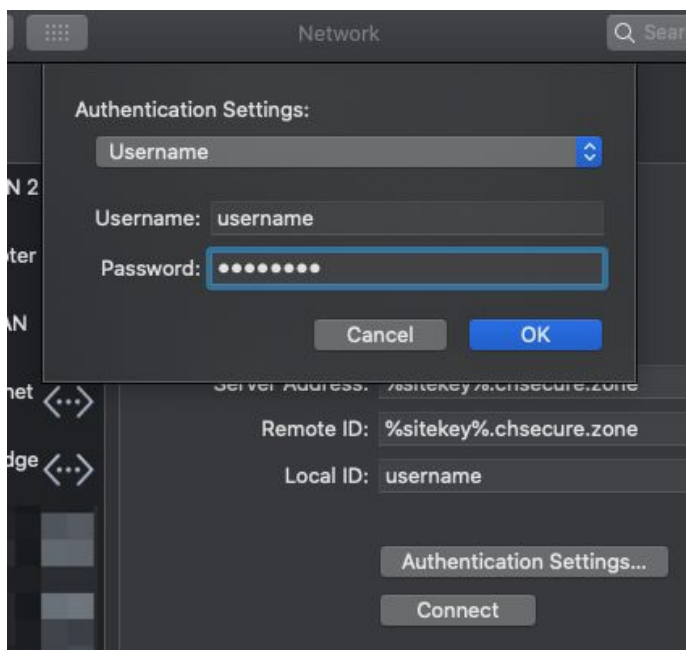

configuration To create a new VPN Connection:

1. Go to **System Preferences > Network**
2. Click on the "+" symbol (lower left) to create a new VPN configuration
3. In the *Interface* drop down select **VPN**
4. In the *VPN Type* drop down select **IKEv2**
5. Enter a meaningful name in the Service Name input field
6. Click on **Create**

This will create and select the new VPN Connection, which we now need to enter the following connection details for:

- Server Address:
- Remote ID: Same as
- Local ID: Your **Username**
- Authentication Settings...:
 - Set dropdown to **Username**
 - Username: Your **Username**
 - Password: Your **Password**

Once all the above details have been entered, click **Connect** to test.

Help
